◆ PROFILE

Computer Science and Engineering student building practical, production-style automation with n8n, REST APIs, and AI model integrations. Has independently designed, deployed, and documented multiple end-to-end workflows — including a validated intake pipeline with AI classification, alerting, and error monitoring. Comfortable picking up new tools quickly and shipping working systems without close supervision.

◆ AUTOMATION PROJECTS

Feedback Intake & Weekly Digest · *n8n · Gemini · Sheets · Telegram · Slack*

Source & docs: https://github.com/Sofiqulxislam/feedback-intake-automation

- Built a form-based workflow that validates and normalizes submissions, logs rejected entries separately, and de-duplicates by email.
- Integrated a Gemini model with structured output to classify feedback by category and sentiment, skipping the model call when there's no text.
- Added Telegram and Slack alerts for low ratings, plus a separate error-monitoring workflow that reports the failing node and a link to the run.
- Wrote a scheduled weekly-digest report (response count, average rating, category breakdown, lowest-rated comments) and published the project on GitHub with setup docs and a credential-stripping script, managed via Git branches and merges.

Quote Bot · *n8n · Telegram*

- Built a scheduled workflow (Schedule Trigger → public quote API → Telegram) that posts automatically with no manual input, published and running continuously.

Rain Checker · *n8n · Telegram*

- Built a scheduled workflow that checks a weather API against a rain-probability threshold and sends a Telegram alert when rain is likely the next day.

Joke Bot · *n8n · Telegram*

- Built a Manual Trigger workflow that calls a public joke API via an HTTP Request node and delivers the result through Telegram — first hands-on workflow, used to learn node connections, JSON structure, and expressions.

◆ STRENGTHS

Quick Learner · Explorer · Problem Solver · Detail-Oriented · Self-Starter

◆ SKILLS

Automation
n8n · REST APIs · JSON

Integrations
Google Sheets · Telegram · Slack · Gemini API

Programming
JavaScript · Python · Java

Tools
Git · GitHub

Office & Design
MS Office · Photoshop

◆ EDUCATION

B.Sc. in Computer Science and Engineering
UITS, Dhaka
2020 – Present

Higher Secondary Certificate
Khilgaon Model College, 2019

Secondary School Certificate
Kaji Jafar Ahmed High School, 2017
